CLAIMS

- 1. A method for producing a virus whose propagation depends on cleavage of a viral protein by a protease, wherein the method comprises the step of producing the virus in the presence of:
- 5 (i) a modified viral protein in which a cleavage sequence for the protease is changed to a cleavage sequence for an alternative protease, and (ii) the alternative protease, and wherein the produced virus comprises the modified viral protein that is cleaved but does not comprise a gene encoding the modified viral protein.
- 10 2. The method of claim 1, wherein the produced virus carries a gene encoding the relevant viral protein comprising a wild type cleavage sequence.
 - 3. The method of claim 1, wherein the produced virus is a nontransmissible virus that lacks a gene encoding the relevant viral protein.
 - 4. The method of claim 1, wherein the alternative protease is endogenously expressed in a cell producing the virus.
 - 5. The method of claim 1, wherein the alternative protease is furin.

15

20

30

- 6. The method of claim 1, wherein the cleavage sequence for the alternative protease comprises Arg-Xaa-Lys/Arg-Arg.
- 7. The method of claim 1, wherein the cleavage sequence for the alternative protease comprises Arg-Arg-Arg-Arg.
 - 8. The method of claim 1, wherein the virus is a minus-strand RNA virus.
 - 9. The method of claim 8, wherein the minus-strand RNA virus is a Paramyxoviridae virus.
 - 10. The method of claim 8, wherein the minus-strand RNA virus is Sendai virus.
- 11. A vector which encodes a modified viral protein in which a cleavage sequence for a protease of a viral protein in a virus whose propagation depends on cleavage of the viral protein
 35 by the protease is changed to a cleavage sequence for an alternative protease, wherein the vector is a viral or non-viral vector that cannot propagate in a cell producing the virus.

- 12. The vector of claim 11, which is a plasmid.
- 13. The vector of claim 11, wherein the expression of the modified viral protein can be induced5 by a recombinase.
 - 14. The vector of claim 13, wherein the recombinase is Cre or Flp.
- 15. The vector of claim 11, wherein the alternative protease is expressed endogenously in the cell producing the virus.
 - 16. The vector of claim 11, wherein the alternative protease is furin.
- 17. The vector of claim 11, wherein the cleavage sequence for the alternative protease comprises Arg-Xaa-Lys/Arg-Arg.
 - 18. The vector of claim 11, wherein the cleavage sequence for the alternative protease comprises Arg-Arg-Arg-Arg.
- 20 19. The vector of claim 11, wherein the viral protein is F protein of a minus-strand RNA virus.
 - 20. The vector of claim 19, wherein the minus-strand RNA virus is a Paramyxoviridae virus.
 - 21. The vector of claim 19, wherein the minus-strand RNA virus is Sendai virus.
 - 22. A mammalian cell containing the vector of claim 11.

25

30

35

- 23. The cell of claim 22, which is a cell for producing a virus whose propagation depends on cleavage of a viral protein by a protease.
- 24. The cell of claim 22, wherein a gene encoding the modified viral protein is integrated into a chromosome of the cell.
- 25. The cell of claim 22, which is a human cell.
- 26. A modified virus of a virus whose propagation depends on cleavage of a viral protein by a

protease, wherein the modified virus comprises a modified viral protein in which a cleavage sequence of the viral protein for the protease is changed to a cleavage sequence for an alternative protease, and wherein the modified virus does not comprise a gene encoding the modified viral protein.

- 5
- 27. The modified virus of claim 26, wherein a produced virus carries a gene encoding the relevant viral protein comprising a wild type cleavage sequence.
- 28. The modified virus of claim 26, which is a nontransmissible virus lacking a gene encoding the relevant viral protein.
 - 29. The modified virus of claim 26, wherein the alternative protease is expressed endogenously in a cell producing the virus.
- 15 30. The modified virus of claim 26, wherein the alternative protease is furin.
 - 31. The modified virus of claim 26, wherein the cleavage sequence for the alternative protease comprises Arg-Xaa-Lys/Arg-Arg.
- 20 32. The modified virus of claim 26, wherein the cleavage sequence for the alternative protease comprises Arg-Arg-Arg.
 - 33. The modified virus of claim 26, wherein the virus is a minus-strand RNA virus and the viral protein is F protein.

25

- 34. The modified virus of claim 33, wherein the minus-strand RNA virus is a Paramyxoviridae virus.
- 35. The modified virus of claim 33, wherein the minus-strand RNA virus is Sendai virus.
